

ANCHORING CLAMP FOR CONNECTON SUSPENSION SET

DESCRIPTION

The anchoring clamp and suspension set console is a component used in overhead power networks to securely support and fix conductor cables.

It is designed to meet the needs of low- or medium-voltage connection systems and provides a reliable solution for installing overhead cables on poles or other supports.

SPECIFICATIONS

- Suitable for twisted cables or bare wires, depending on the model.
- Available for a wide range of cable diameters.
- Designed to withstand significant tensile loads (maximum load specified in kN).
- Quick and secure mounting system.
- Compatible with standard anchoring clamps and suspension accessories.
- Resistant to UV rays, extreme temperature variations, and humidity.

MATERIAL

Made from aluminum, hot-dip galvanized steel, or high-strength composite material, ensuring enhanced durability and excellent corrosion resistance.

APPLICATION

- Used in low- or medium-voltage overhead distribution networks.
- Enables cable anchoring at line ends or at angle points.
- Facilitates cable suspension in straight lines to reduce mechanical stress.
